

QUILTING MACHINE:
CUSTOM OPTIONS

Gribetz International

GLOBAL SYSTEMS GROUP®

A DIVISION OF *Leggett & Platt*

Freestanding Border Slitter (BSF) & Optional Border Carts

- Freestanding Border Slitter can be used behind any quilting machine or as a stand-alone slitter
- Available in 90", 110", and 130" models
- Slits quilted border up to 5/8" thick
- Built-in quilted fabric accumulator allows for smooth flow of product and automatically stops the slitter when the quilting machine stops
- Includes 13 adjustable knives and sharpener attachment
- Cut border can be wound up on optional Wind-Up device or fed into optional border carts
- Meets all OSHA and CE safety directives

Wind-Up Attachments (BC-MWU) (PC-MWU)

- Two models of wind-ups are available. One is designed to attach to the back of a Gribetz quilter and the other is designed to go behind a Gribetz panel cutter (pictured)
- Each features a tension control and variable speed motorized wind-up
- Utilized with the panel cutter, the operator has the option of rolling up quilting material without unthreading the panel cutter
- Convenient unload height
- Available for all Gribetz quilters or panel cutters, regardless of age

Border Slitter over Panel Cutter (BSP)

- Developed specifically to be mounted to all Gribetz panel cutters
- Torque control motor is designed to support the high speed of the Gribetz quilting machines
- The slitting device is capable of handling border thickness up to 5/8"
- Blades are secured in guarded area to provide two levels of safety
- Slitter will not operate while guard doors are open and door cannot open while slitter is operating
- Blades can be sharpened with guards in place
- Motorized Wind-Up is included with the Border Slitter
- Meets all OSHA and CE safety directives

Deluxe Material Handling Pack (CW-MHP)

Handling Pack for Reliance Series

- These material handling packs are designed to in front of either a Reliance® or a Paragon® multi-needle quilt machine
- Each material handling pack includes a catwalk, thread rack, and supports for two to three rolls of filler material
- Additional filler material stands are available for purchase

Handling Pack for Paragon Series

Electronic Thread Break Detector (ETB)

- Thread break detector constantly monitors the needle thread and stops the quilter when a broken or loose thread is detected
- Visual signal (red light) illuminates when detector is activated, enabling the operator to immediately correct the thread problem
- Early thread break detection helps reduce costly quilt repairs
- Available for all Gribetz quilting machines, regardless of age

Our experienced Global Systems Group sales and technical support team provide customized solutions for increasing production and reducing manufacturing cost.
